precog

Precog Response to Request For Information: Health Technology Ecosystem (Code CMS-0042-NC)

Agency: Department of Health and Human Services, Centers for Medicare & Medicaid Services

Introduction

Precog is an AI-powered, automated platform that connects seamlessly to any application API and loads data into your data warehouse or database, fully prepared for analytics, machine learning, and business/intelligence applications. Precog has many out-of-box connectors and importantly, can create a fully functional new API connector in hours, without a single line of code. As such, it is extremely well suited to automate the movement of data to/from sources as part of the CMS's Health Technology Ecosystem.

Precog's comments/input are centered around these three specific portions of the RFI:

Data Exchange

PR-5. Which of the following FHIR APIs and capabilities do you already support or utilize in your provider organization's systems, directly or through an intermediary?

- Patient Access API.
- Standardized API for Patient and Population Services.
- Provider Directory API.
- Provider Access API.
- Payer-to-Payer API.
- Prior Authorization API.
- Bulk FHIR—Do you support Group ID-based access filtering for population-specific queries?
    - SMART on FHIR—Do you support both EHR-launched and standalone app access? What does the process for application deployment entail?
- CDS Hooks (for clinical decision support integrations).

Precog has reviewed this list and virtually all of these APIs can be supported in the Precog platform. We invite the CMS Data Exchange team to a technology exchange session to demonstrate its AI-powered,

automated platform that connects seamlessly to any application API and loads data into your data warehouse or database, fully prepared for analytics, machine learning, and business/intelligence applications.

Technology Vendors, Data Providers, and Networks

This section is intended for all stakeholders to provide input on questions as they relate to use cases and workflows that involve technology vendors, data providers, and networks. While we certainly want technology vendors, data providers, and networks to answer questions in this section (and in other sections) from their point of view, we also invite all stakeholders to provide their viewpoints on the technology vendor, data provider, and network use cases as appropriate.

Precog submits this response to assist the CMS in its market research, inform CMS of the existence of Precog's approach to moving data, and to encourage CMS to consider adding provisions in any pending solicitation(s) requesting and rewarding vendors to include an automated approach to API-driven data movement as part of their overall Health Technology Ecosystem. Doing so will enhance the overall approach and lower the cost of enabling API-driven data movement.

Data Exchange

TD-12. Should CMS endorse non-CMS data sources and networks, and if so, what criteria or metrics should CMS consider?

Precog's platform can easily generate and support custom connectors to any data source with an API.

Company name, address, point of contact

Experience
Precog has many customers using its API-driven data movement platform platform. A number are highlighted with quotes on its website on this page: https://precog.com/about/

Here are some examples as well:

- Large government contractor(s) leveraging Precog to perform Spend analytics for their fighter program with Ariba data.
- Large Healthcare provider(s) leveraging Cerner data through precog to perform advanced patient care analytics.
- Distributed Healthcare provider(s) leveraging Precog to gather various data applications (EHR, Netsuite, Salesforce) for patient Anxiety Mental Health analytics
- Precog is leveraged by the largest Utility, Manufacturing, Energy and Mining companies in the world for their advanced analytics. Reporting, Machine Learning, AI The platform is proven to be able to address the largest analytical problem sets.

Precog's Platform

Precog is an intelligent integration platform that seamlessly connects to any application API and delivers analytics-ready data to your preferred destination. Our AI-powered solution creates fully functional, no-code connectors in hours–not weeks or months–giving you access to the data you need quickly.

Fast Deployment
Create new API connectors in hours with a simple in-app wizard. Connect to your entire suite of applications and start loading data in record time.

Effortless Maintenance
Future-proof ELT workflows and eliminate
maintenance with connectors that automatically adjust to any API updates and schema changes.

Unmatched Accuracy
Extract all of your data, regardless of its complexity or customization. Automatically generate analytics-ready data optimized for business intelligence, machine learning and AI applications.

Cost-Effective & Predictable Pricing
Simplify your ELT into a single, comprehensive solution that can handle all your data integration needs. Annual pricing, instead of volume-based pricing, means you won't get a surprise bill.

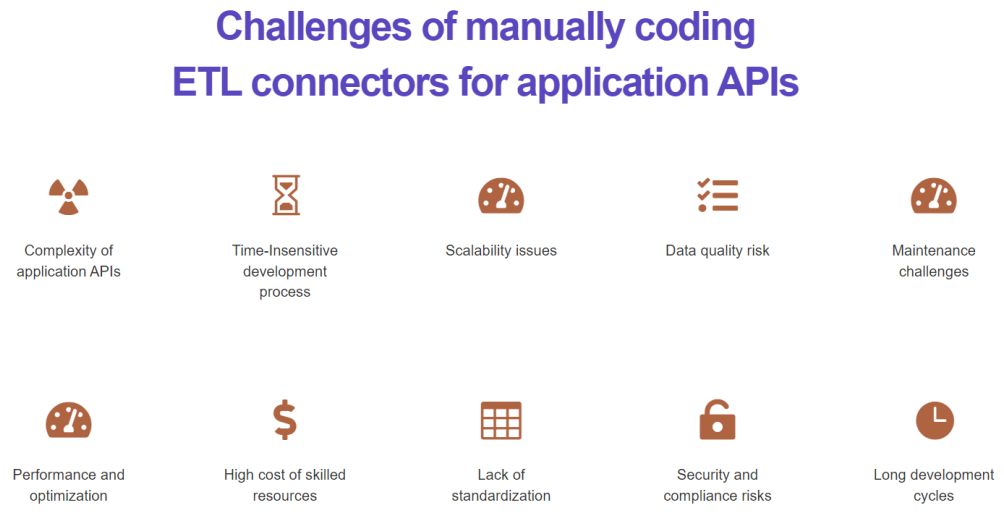
Existing Connectors

Precog has 2000+ SaaS API Connectors. The searchable full list is on our website: https://precog.com/data-sources/

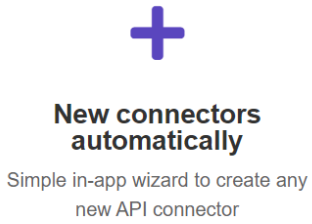
Existing Destinations

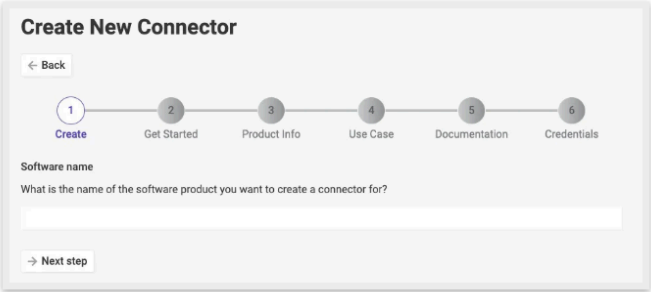
- Amazon S3 Cloud Storage and Amazon Redshift
- Google Cloud and Google BigQuery
- MS Azure Cloud Storage
- Databricks
- Snowflake
- SQL Server
- PostgreSQL
- Confluent

Creating New Connectors



Vs. Precog's automated approach:





Adapting to changing APIs

AI-powered ELT solutions like Precog can ensure seamless data integration and compatibility with the latest API updates. The platform is designed to automatically detect and adjust to API changes, including updates to authentication methods or schema changes. Precog detects those changes automatically and adjusts automatically in the platform. This ability to adapt to API changes without requiring manual intervention is one of the key advantages of using an AI-infused ELT solution.

What Precog Is Not

While it's crucial to understand what Precog is, it's equally important to clarify what it isn't:

Not a Development Environment

Precog is not a coding platform. You won't be manually mapping schemas, inspecting, or modifying connector code. If you prefer to spend time and resources on custom development, other solutions exist for that.

Doesn't Require Programming

Precog doesn't use general-purpose languages like Python, Go, or Spark. Need a new API connector? Simply use the app wizard, provide basic integration details, and submit your request. Within ~24 hours, the connector will appear in your account—no coding, no hassle.

Not an iPaaS

Precog doesn't connect applications to each other. Instead, it extracts data from your applications and loads it into your chosen data warehouse or database, ready for analytics, machine learning, or AI applications.

Security & Privacy

SOC2

SOC2 Type 1 and Type 2 certified.
