Subject: Advancing CMS Health Tech Ecosystem Objectives through Privacy-Centric, Interoperable, and Consent-Driven Health Solutions

Introduction

Global eSolutions Group is committed to advancing healthcare technology innovation while ensuring compliance with CMS priorities, including interoperability, privacy protections, equitable patient access, and regulatory adaptability. As CMS builds a comprehensive Health Tech Ecosystem, our expertise in ontology-driven data governance, adaptive consent management, automated policy enforcement, and metadata tagging positions us as a key collaborator in achieving CMS objectives.

Supporting CMS Health Tech Ecosystem Priorities

CMS aims to create an integrated, secure, and patient-centric healthcare data exchange that aligns with evolving regulations and ensures transparent, interoperable communication between providers, individuals, and healthcare organizations. Global eSolutions Group provides cutting-edge solutions to support these goals.

1. Interoperability and Seamless Data Exchange

- Built on HL7 FHIR, C-CDA, V2.x, and OMOP standards, our framework ensures real-time, secure, and accurate data sharing across EHRs, HIEs, QHINs, and third-party applications.
- FHIR-based APIs support policy-driven automated data governance, simplifying CMS's efforts to improve data liquidity and accessibility.
- We align with CMS initiatives on longitudinal patient records, ensuring data provenance tracking and transparent audit trails to improve data integrity and trust.

2. Privacy-Centric and Policy-Driven Data Governance

- Granular privacy controls allow patients to customize consent settings based on security level, jurisdictional policies, and personal preferences.
- We enable metadata-driven classification, ensuring sensitive data (e.g., mental health, reproductive health, substance use disorder, SDOH) is properly tagged and restricted in compliance with HIPAA, 42 CFR Part 2, state regulations, GDPR, and the American Privacy Rights Act of 2024 (APRA).

- Our policy automation eliminates manual updates, ensuring compliance with state-specific laws, CMS regulations, and emerging privacy policies.

3. Equitable and Patient-Centric Data Access

- CMS prioritizes reducing disparities in health data accessibility, particularly for underserved populations. Our secure consent management system fosters trust and transparency, giving patients full control over their data-sharing preferences.
- Our approach ensures compliance with local and federal mandates, such as California Consumer Privacy protections, reproductive healthcare legislation, and SUD confidentiality regulations, strengthening CMS's health equity initiatives.

4. AI-Driven Compliance and Policy Automation

- CMS's initiative to modernize regulatory oversight aligns with our AI-driven compliance monitoring, which automatically adapts to new regulations without requiring manual policy updates.
- Our ontology-based policy framework proactively supports cybersecurity, auditing, and regulatory alignment, reinforcing CMS's commitment to secure healthcare data management.
- IoT-integrated real-time policy validation ensures that sensitive health data remains protected in transit, addressing data security concerns within CMS's tech ecosystem.

Global eSolutions Group Consent Management Application – Strengthening CMS Initiatives

The Global eSolutions Group Consent Management Application is a next-generation privacy and interoperability solution designed to empower patients, ensure compliance, and strengthen CMS-driven health technology objectives.

Key Features Supporting CMS Priorities:

- Flexible, adaptive consent management – Allowing patient-driven data sharing in alignment with local, state, and federal privacy laws.
- Metadata-driven classification – Enhancing policy-based data parsing for security, sensitivity, and compliance.
- Automated regulatory adaptation – Enabling CMS-driven policy enforcement updates without manual intervention.

- FHIR-based interoperability – Facilitating secure API access across EHRs, HIEs, QHINs, and third-party health platforms.
- Privacy safeguards for SUD, mental health, reproductive health, and SDOH data – Strengthening CMS's health equity objectives.
- AI-driven compliance monitoring – Supporting CMS's cybersecurity, privacy, and auditing frameworks.

By integrating ontology-driven governance, metadata intelligence, and policy automation, the application ensures that patients remain in control of their data while providing CMS with a scalable, secure, and adaptable privacy management system.

Global eSolutions Group is positioned to help CMS advance its Health Tech Ecosystem objectives by delivering privacy-centric, interoperable, and patient-driven health solutions. Through secure consent management, dynamic policy enforcement, and automated compliance auditing, we support CMS's vision for a modern, equitable, and transparent healthcare landscape, ensuring data security, patient autonomy, and seamless interoperability.
