RE: Request for Information: Accelerating the Adoption and Use of Artificial Intelligence as Part of Clinical Care (HHS Health Sector AI RFI)

Dear Deputy Secretary O'Neill and Assistant Secretary Keane,

On behalf of the Intersocietal Accreditation Commission (IAC), we appreciate the opportunity to comment on the Department of Health and Human Services' (HHS) request for information (RFI) on Accelerating the Adoption and Use of Artificial Intelligence (AI) as Part of Clinical Care. The IAC is a nonprofit, nationally recognized, Center for Medicare and Medicaid Services (CMS)- Advanced Diagnostic Imaging (ADI) accrediting organization, founded by medical professionals to advance appropriate utilization, standardization, quality imaging and safety of diagnostic imaging and interventional-based procedures. IAC offers accreditation in hospitals and all other settings where diagnostic testing and procedures are performed. Importantly, IAC represents a unique collaboration of physicians, technologists, sonographers, physicists, and numerous other medical professionals representing more than 40 medical specialties as sponsoring organizations, who contribute to its multi-stakeholder efforts. With its mission to improve health care through accreditation®, the IAC utilizes a rigorous clinical peer review process to ensure that quality and safe practices are established with the goal of enhancing patient outcomes.

Since its inception in 1991, the IAC has granted accreditation to more than 14,000 sites in ten diagnostic imaging and interventional-based accreditation programs. The IAC is also one of the four national accreditation organizations to be [designated by CMS](#) to ensure the quality of advanced diagnostic imaging (ADI) suppliers, including physician offices and Independent Diagnostic Testing Facilities, in compliance with the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA). Additionally, IAC is the only imaging accreditation organization that holds ISO certifications in Quality Management Systems (ISO 9001:2015)—demonstrating our commitment to quality, reliability, and ongoing improvement—and Information Security Systems (27001:2022)—demonstrating our commitment to protecting data integrity, confidentiality, and availability.

Acknowledging the ongoing, rapid evolution of artificial intelligence (AI) in medicine, the IAC Board of Directors established an AI Task Force in 2024. Developed through the collective expertise of the task force, a guidance document was created, approved by the IAC Board of Directors, and published in April 2025, as an addendum to each set of [IAC Standards](#).

The IAC AI Guidance Document serves as a **recommendation** for IAC-accredited facilities utilizing AI technology and states the following:

To assure the quality and safety of care delivery when using AI applications for direct-patient care (clinical*) purposes, each facility should create and follow policies and procedures that address:

- 1. Training for personnel who use AI**
- 2. Security of AI software, updates, HIPAA considerations, etc.**
- 3. AI for Quality Improvement (if applicable)**
- 4. Appropriate use for each AI application**
- 5. Governance (authority to make decisions regarding AI implementation)**

**** Clinical use of AI includes image acquisition, image processing/enhancement, image interpretation, report generation, risk assessment of prognosis, patient history, identification of critical values/results and equipment quality control.***

IAC recognizes that AI use is expanding and there is a lack of uniform processes to assure patient safety and quality care delivery. Our recently issued guidance represents an interim solution, offering foundational guidelines to address the most rudimentary quality and safety aspects of clinical AI. However, as cutting-edge AI innovations continue to evolve, IAC intends to enhance its guidance for the clinical setting.

In this RFI, HHS seeks feedback on ways in which it can best support private sector activities (e.g., accreditation, certification, industry-driven testing, and credentialing) to promote innovative and effective AI use in clinical care. IAC's accreditation programs already include thorough assessments of the care environment— including infrastructure, capacity, systems, and processes— which promote data-driven improvements that lead to better outcomes. IAC will continue to incorporate established guidelines, including those supporting effective and safe use of AI, into our accreditation standards.

IAC's number one priority is to promote safe and equitable patient care, and we stand ready to assist HHS in ensuring those goals are preserved as AI use in clinical care rapidly evolves. IAC would be happy to meet with HHS to discuss our work in more detail, as well as a potential future collaboration when guidelines for the use of AI are established. Please do not hesitate to contact me via email at ttolpegin@intersocietal.org or by phone at 1.800.838.2110. We also offer the [IAC website](#) to learn more about our various programs and standards, focused on the quality of diagnostic imaging and interventional procedures.

Sincerely,

Tanya Tolpegin, MBA, CAE
Chief Executive Officer
Intersocietal Accreditation Commission
