Re: file code CMS-0042-NC

Dear Assistant Secretary:

In response to the Centers for Medicare & Medicaid Services ("CMS") request for information on May 16, 2025, regarding health Technology Ecosystem – file code CMS-0042-NC, Capital Rx, Inc. ("Capital Rx") is excited to describe the innovations it has achieved to reduce client expenditures, improve administration of plan benefits, provide greater transparency into management of our client's plan expenditures, and improve access to accurate information for our members and health plan clients. We believe these innovations can be adopted by CMS for Parts A, B, C and D to provide greater efficiency for the Medicare program, and improved access and information to Beneficiaries.

Capital Rx's Judi®, our proprietary claims processing platform serving commercial, Medicare, and Medicaid lines of business, was built from the ground up to streamline all the necessary functions to administer a pharmacy benefit efficiently. It is the only platform of its kind built following the enactment of Medicare Part D, and Judi can handle Medicare and Medicaid claims processing requirements without the usual worries about bending outdated systems to meet regulatory standards.

Judi represents a paradigm shift in pharmacy benefits administration. With its flexible design, friendly UI, scalability, and adaptability, health plans can confidently meet regulatory requirements and accommodate unique member needs. Judi is designed to handle all administrative workflows and processes **on one platform** for all plan types: Medicare, Medicaid, and Commercial. It does so in seamless and user-friendly way, eliminating the pain point arising from the use of an antiquated legacy claim administration infrastructure used by the vast majority of the health care industry (switching between systems). In addition, Capital Rx believes Judi is the only claims processing platform that is process pharmacy and medical claims and capable of providing unified claims processing. Thus, providing real-time data sharing across medical and pharmacy claims and reducing administrative friction.

Capital Rx

A simple example to demonstrate the benefits of Judi, and unified claims processing, is by reviewing how eligibility files are managed under the current health infrastructure. This should be a simple process of determining whether a beneficiary is eligible or not for their benefit. However, because the medical and prescription platforms used today by the health industry are different, and the systems used by each carrier, provider, and payor is different, the moment an eligibility file moves from one system to the next it is already inaccurate. Thus, there is a risk of beneficiaries being mistakenly identified as ineligible, claims inappropriately being paid, not paid, claims being coded incorrectly etc. However, if the claims processing platform used for medical and prescription is unified – these risks as mitigated, if not eliminated.

The effectiveness of Judi in assisting our payor clients to reduce costs and improve the member experience is evident by the success of Capital Rx. Most recently, Rice University stated its plan costs were down at least 5% after moving to Capital Rx as compared to their previous vendor. Rice University attributed the simplicity of Capital Rx's approach, and the ability for Rice University to leverage Judi's to realize the value centralized platform may provide – easy access, flexibility to implement changes quickly, and scalability.

Further, an early adopter of Capital Rx and Judi experienced a per employee per month trend of -11.8% through the end of 2022. The actual annual costs experienced by this client was 9.7% lower than the client's actuarial projects for the same time period.

In summary, Judi will enable CMS to centralize processes, improve the patient experience, and drastically reduce costs. As mentioned above, this can be achieved through (i) real-time patient and plan management for both pharmacy and medical benefits, (ii) Centralized operational, administrative, and financial services under one unified workflow, removing administrative waste, (iii) Enablement of innovative pricing and reimbursement models, including management of value-based care and contracting, and (iv) Removal of the patchwork of antiquated systems and third-party dependencies contributing to inaccurate data, billing errors, lagging reimbursement payments, and soaring, highly variable costs for care.

We welcome the opportunity to have further dialogue with CMS regarding how Judi could provide considerable value.

Sincerely,

_____
