YOUR JOURNEY TO
AI-READINESS STARTS WITH **DATAOPUS**

Data Opus

5-Steps to AI Readiness

START

1. SCAN

Perform a comprehensive **data profiling** analysis on key data sets to determine the **AI-readiness** of your project.

Assess **data integrity, completeness, accuracy**, and **schema alignment** to ensure the foundation is solid for downstream AI models

2. CATALOG

Utilize autogenerated artifacts like **data dictionaries, AI-domain dictionaries, and code inventories** to shift time and cost from data **cleaning** and **transformation** to building models.

Ensure **metadata management, data lineage**, and **data discoverability** for quick access and efficient model development.

3. DISCOVER

Review hundreds to thousands of **actionable findings** preventing AI-readiness, such as **data integrity issues, data loss, mismatches**, and **performance bottlenecks**.

Document and prioritize insights for **data standardization, normalization, and optimization.**

4. LEARN

Recognize **best practices** to enhance AI readiness and understand why the identified issues are problematic.

Explore strategies like **data partitioning, compliance** (e.g., **GDPR, HIPAA**), and **data security** to meet AI governance standards.

5. IMPROVE

Leverage suggested changes to **configurations, tables, columns, indexes/keys,** and code that are hampering your AI-readiness.

Implement **indexing optimization, schema restructuring,** and **performance tuning** to achieve a scalable and efficient AI-ready system.

AI READY

680 S Cache Street
Suite 100-14672
Jackson, WY 83001

BENEFITS TO EVERY AI PROJECT

Data Opus

- Reduce time to implement effective and ethical AI solutions
- Eliminate 99% of effort to know AI readiness
- Uncover hidden problems
- More clean, complete, and reliable data
- Greater performance
- Drive down manual efforts for harvesting, cleaning, preparation, and transformation
- Increased comprehension of data collection
- Actionable findings, plans, risks, and issues
- Suggestive fixes
- Decreased errors and omissions
- Better assurance to AI fairness (Ethical AI)
- Cut cloud spend
